

# Root Work Framework Landing Page

Official landing page for the Root Work Framework - A trauma-informed, healing-centered pedagogy integrating STEAM, Living Learning Labs, and Project-Based Learning.

## About

The Root Work Framework was developed by Dr. Shawn A. Hearn, Ed.D., J.D., founder of Community Exceptional Children's Services (CECS). This framework is grounded in SAMHSA's 6 principles of trauma-informed care and the evidence-based 5Rs methodology.

## Deployment Instructions

### Prerequisites

- A GitHub account
- A Vercel account (free tier works perfectly)
- Git installed on your local machine

### Step 1: Push to GitHub

1. Initialize Git repository (if not already done):

```
git init  
git add .  
git commit -m "Initial commit: Root Work Framework landing page"
```

2. Create a new repository on GitHub:

- Go to <https://github.com/new>
- Name it rootwork-framework (or your preferred name)
- Set visibility to Public or Private
- Do NOT initialize with README, .gitignore, or license
- Click "Create repository"

3. Connect and push to GitHub:

```
git remote add origin https://github.com/YOUR-USERNAME/rootwork-framework.git  
git branch -M main  
git push -u origin main
```

## Step 2: Deploy to Vercel

### Option A: Deploy via Vercel Dashboard (Easiest)

1. Go to <https://vercel.com> and sign in
2. Click "Add New..." → "Project"
3. Import your GitHub repository
4. Vercel will auto-detect it as a static site
5. Click "Deploy"
6. Your site will be live at <https://your-project-name.vercel.app>

### Option B: Deploy via Vercel CLI

1. Install Vercel CLI:

```
npm install -g vercel
```

2. Deploy:

```
vercel
```

3. Follow the prompts to link your project

## Step 3: Custom Domain (Optional)

1. In Vercel Dashboard, go to your project
2. Click "Settings" → "Domains"
3. Add your custom domain
4. Follow DNS configuration instructions

## Project Structure

```
rootwork-deployment/
├── index.html      # Main landing page
├── vercel.json     # Vercel configuration
├── README.md       # This file
└── .gitignore       # Git ignore rules
```

## Features

- **Responsive Design:** Mobile-first, works on all devices
- **Brand Standards:** Official Root Work Framework colors and typography
- **Embedded Logo:** High-quality Emblem of Knowledge and Balance
- **SAMHSA-Aligned:** Built on trauma-informed care principles
- **SEO Optimized:** Proper meta tags and semantic HTML

## Local Development

To view locally, simply open `index.html` in your web browser, or use a local server:

bash

```
# Using Python
python -m http.server 8000
```

```
# Using Node.js
npx serve
```

Then navigate to `http://localhost:8000`

## Updates

To update the deployed site:

1. Make changes to `index.html`
2. Commit changes:

bash

```
git add .  
git commit -m "Description of changes"  
git push
```

3. Vercel will automatically redeploy
